Decode the chart

1. Regional comparison - Q2 2026

i. what is trying to tell?

the bar chart tells about the regional comparison - Q2 2026 in this

the graph tells Oelhi has the highest enrollment students and Bhopal has the lowest enrollment students and

remaining states are moderate

ii. Trust it? why or why not?

partially I trust it because the number starts from 400, not from 0.

2. Budget Allocation by Department?

i. what is trying to tell?

this pie chart tells about the budget allocation by department with 12 categories. each department has

separate colors

ii. Trust it? why or why not?

No it is not possible to trust, why because it is OK but in this pie chart labels and department names

are not there, that's why it's very difficult to understand.

3. Coffee consumption vs productivity score

i. what is trying to tell?

This line graph tells about the difference b/w or comparison b/w coffee consumption vs productivity score. and from this graph what is understood means as coffee consumption increases productivity score also increases.

ii. Trust it? why or why not?

Partially
No, why because normally coffee consumption increases, it will cause health issues, normally the productivity score will reduce but in this chart both are increasing simultaneously.

4. Advertising Spend vs. Sales Revenue

i. what is trying to tell?

This scatter plot tells about the comparison b/w Advertising Spend vs Sales Revenue in Rupees.

ii. Trust it? why or why not?

No, it is not possible to trust, why because the scatter plots are too elongated, it is not possible to understand easily.
